

Listening Comprehension : Numbers Review

This is a short comprehensive numbers review activity that I made up and which I use throughout the 3 years in the STID (*Statistique et Traitement Informatique des Données*) department.

It takes about a half an hour.

I record the 40 items and play the recording twice. (The best is to have native speakers with 2 different accents do the recording.)

The students write the figures down on the answer sheet and then, to correct their work, they read the items out loud and I write the answers on the board.

I have 5-6 sets that I use during the 3 years for occasional quick review sessions, or for exams.
